

StudentApp

Technologies

React Native, Spring Boot (Java), MySQL

Deployment Platform

Google Play Store, Hosted on AWS

Purpose

To provide an online platform for registered shopkeepers to order products directly from wholesalers based on their cart selections.

Key Features

- An **OTP verification system** where the backend generates a **6-digit OTP** based on the phone number to verify **users** and **admins**.
- An **account management system** that creates a unique account for each user.
- Two types of services are available: **Product Services** and **Kitchen Services**.
- A highly efficient **admin interface** for uploading general products under Product Services and food items under Kitchen Services, along with a well-designed **customer interface** for browsing products and food items and adding them to the cart.
- A **professional cart management** system designed for efficient shopping and smooth order management.
- After **successful payment**, the **admin** can view the order details along with customer information.
