PrintoutApp

Technologies

React Native, Spring Boot (Java), MySQL

Deployment Platform

Google Play Store, Hosted on AWS

Purpose

To offer an online printout service near multiple colleges, allowing students to upload their PDFs and receive the printouts before their morning classes.

Key Features

• A well-designed **login page** that prompts users to enter their details, which are saved after **OTP verification.**

• Each **user account** is automatically created based on their login details.

• Users can easily select and **upload PDF files** from their local system.

• **Multiple printing choices:** single-sided, double-sided, colour, or black & white.

• Advanced features allow users to choose cover colour, binding type, taping, or stapling.

• After selecting a **PDF file and all print options**, the order automatically moves to the **cart**, where users can place their **printout order.**
